DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 9 and 11-38, drawn to braking mechanisms for bicycles, classified in class 482, subclass 63.
- II. Claims 10, 39 and 40, drawn to adjustable bicycle frames, classified in class 280 subclass 278 and 283.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility as a braking mechanism for bicycles and subcombination II has separate utility as height adjusting means for a seat or handle bar of a bicycle. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is required under to elect a single invention for prosecution on the merits. Applicant is advised that a reply to this requirement must include a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.
